MUHAMMAD USMAN QURESHI

AI-ASSISTED SOFTWARE ENGINEER | FULL-STACK & AUTOMATION

Islamabad, Pakistan • +92 319 2304660 • ushakurosaki@gmail.com • github.com/ushalabs

PROFILE

Final-year Software Engineering student delivering functional products through AI-assisted development, API integration, systematic testing and iterative debugging. Published an Android social app on Google Play, packaged a native Windows downloader, and developed agentic incident-operations and ML security platforms. Seeking remote internships and remote jobs in software engineering, full-stack development or AI automation to contribute within a real engineering team.

TECHNICAL SKILLS

Languages & tools Python, C++20, TypeScript, JavaScript, SQL, Git/GitHub, Docker, CMake

AI & automation LangGraph, Gemini/LLM APIs, RAG, pgvector, n8n, XGBoost, workflow orchestration

Full-stack & native React Native, Expo, Next.js, React, FastAPI, REST APIs, WebSockets, Qt 6

Data & infrastructure Firebase, Firestore, PostgreSQL, SQLite, Redis, libcurl, libtorrent, Prometheus, Grafana

SELECTED PROJECTS

VELORA | Real-Time Social & Messaging App

LIVE ON GOOGLE PLAY • Expo / React Native · Firebase · Cloudinary • Google Play / GitHub

- Shipped an Android social application with real-time 1:1/group chat, multimedia and voice messages, friends, profiles, posts, stories, comments and notifications.
- Integrated Firebase Authentication/Firestore, Cloudinary uploads and Firebase Cloud Messaging; configured user-scoped access rules and production distribution.

DOWNSHIFT | All-in-One Native Windows Download Manager

WINDOWS v1.0.0 PACKAGED · MICROSOFT STORE SOON • C++20 · Qt 6 · libcurl · libtorrent · SQLite • GitHub

- Developed a unified native desktop downloader supporting segmented HTTP/HTTPS transfers, torrent/magnet downloads, video workflows and pause/resume with persistent history.
- Integrated Chrome Manifest V3 capture/Native Messaging and recovery safeguards; built an NSIS Windows installer and validated native transfer and packaging workflows.

AEGISOPS | AI-Assisted Incident Operations Platform

LOCAL VALIDATION · AWS INTEGRATION PLANNED • FastAPI · LangGraph · n8n · PostgreSQL • GitHub

- Built an incident-response lifecycle that combines monitoring, Gemini/LangGraph investigation, pgvector-backed RAG, human-approved remediation and independent recovery checks.
- Implemented a Next.js operator dashboard, Docker test environment, Prometheus/Grafana observability, and reusable environment-connector architecture.

SENTINEL | ML Network Intrusion Detection & Automation

VALIDATED PROJECT • XGBoost · FastAPI · PostgreSQL · n8n · Gemini • GitHub

- Created a real-time detection pipeline using Scapy/Npcap flow collection, 77-feature vectors, XGBoost inference, PostgreSQL and a WebSocket-enabled analytics dashboard.
- Automated threat enrichment with AbuseIPDB and Gemini through n8n; implemented analyst approval before simulated response, with 15/15 controlled end-to-end checks passing.

EDUCATION & CERTIFICATION

B.S. Software Engineering | Riphah International University, Islamabad | Jun 2027

Google AI Professional Certificate | Google | Verify credential
